

SCOPUS

OBJETIVOS

1. Identificar los conceptos claves de la base de datos SCOPUS.
2. Comprender los tipos de Búsqueda de ésta plataforma.
3. Utilizar la base de datos de SCOPUS para encontrar datos relacionados con la producción científica. (documentos, citas, referencias, índices, etc.)

La mayor base de datos de resúmenes y citas, con más de 19,000 títulos de 5.000 editoriales internacionales.

47 millones de registros (70% con resúmenes)

Un punto de acceso multidisciplinario, es actualizado diariamente y contiene los Articles in Press de más de 3,850 revistas

Enlace a la fuente de los textos completos en uno solo click.

La mejor herramienta para estudios bibliométricos y evaluaciones de producción científica.

Refinar y **analizar** los resultados de búsqueda.

Rastrear citas para la medición de producción científica y visualizar índice h.

Identificar autores, instituciones, fuentes y encontrar información relacionada a ellos.

Análisis para la evaluación de revistas científicas

¡CONECTE DISCIPLINAS Y NO SE PIERDA DE NADA!

- 1 Un artículo en el campo de Agricultura* se remite a un artículo en el campo de Ciencias de la Vida.

- 2 El segundo artículo se habría perdido con sólo una base de datos de Agricultura, este artículo cita al tercero.

- 3 El tercer artículo del campo de Agricultura no estaba referenciado por el primero y podría ser vital para la investigación.

Identification of a support vector machine-based biomarker panel with high sensitivity and specificity for nonalcoholic steatohepatitis Article in press

Yilmaz, Y.^{ab} , Eren, F.^{bc}

^a Department of Gastroenterology, Marmara University, School of Medicine, Istanbul, Turkey

^b Institute of Gastroenterology, Marmara University, Istanbul, Turkey

^c Department of Medical Biology and Genetics, Marmara University, School of Medicine, Istanbul, Turkey

Abstract

Background: Although liver biopsy remains the best diagnostic standard for nonalcoholic steatohepatitis (NASH), non-invasive tests are eagerly awaited. In this study, we sought to develop a support vector machine (SVM) algorithm to discriminate with high accuracy between subjects with NASH and controls using a blood-based biomarker panel. **Methods:** A total of 17 biomarkers were measured by commercially available enzyme-linked immunosorbent assays in 136 serum samples from patients with biopsy-proven NASH (n = 60) and subjects with normal ALT and no evidence of fatty liver on ultrasound (n = 76). The **database** was randomly divided (1:1 fashion) into a discovery set for classification training and in a validation set of the chosen biomarkers in blinded samples. Multivariate analysis was performed by means of SVM. **Results:** After the identification of a group of three most discriminative biomarkers (osteoprotegerin, fibroblast growth factor 21, and M30) in the discovery set, the application of SVM to the validation test resulted in a 92.5% sensitivity and 84.1% specificity for distinguishing subjects with NASH from controls. **Conclusions:** A targeted biomarker profiling combined with a SVM-based pattern identification approach may allow the identification of patients with NASH with clinically relevant accuracy and validity. © 2012 Elsevier B.V.
